

Artificial Intelligence / Machine Learning Engineer

We are an ambitious scale-up that offers an intelligent automation product. We help our clients provide better customer experiences and reduce workloads by automating everyday cognitive tasks.

We are looking for an AI / ML Engineer to join our team and further build the self-learning technology that underpins our intelligent automation product.

What will you do?

- Work on real world AI problems with real world datasets
- Advance the various aspects of our self-learning product in line with our roadmap
- Work closely with our clients to deploy and train our product for their specific use-cases
- Further advance our in-house research in collaboration with our academic partners
- Solve problems and eliminate bottlenecks
- Bring the results of your work from the lab environment into production at our clients
- Above all, ship lots of high quality code in every sprint!

Who are you?

- A brilliant engineer that likes to translate business challenges into cutting-edge technical solutions
- You pride yourself in seeing the impact from your work in a product that is used daily at our clients
- Very proficient in Python (good coding practices and efficiency)
- Hands on experience with NLP, classifiers, entity extraction, etc.
- Keen to explore the very latest technologies such as character based neural networks
- Experience in version control (git - branches, pull requests)
- Experience in or willing to work with Agile development methodology
- Experience with Continuous Development / Continuous Integration (Bitbucket pipelines)

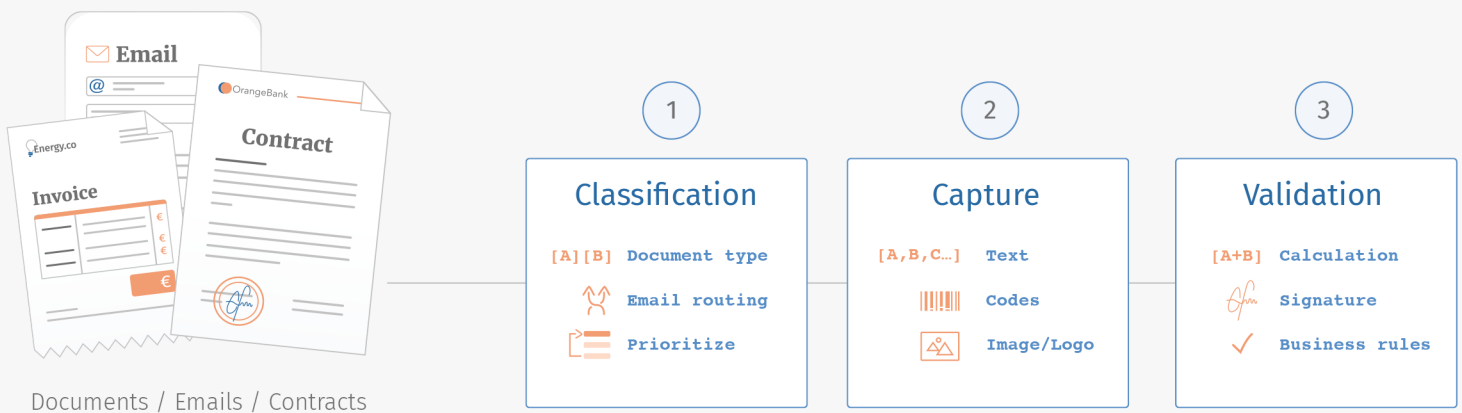

What do we offer you?

- A unique opportunity to work on cutting edge technology in the exciting world of AI
- Combine best of both worlds: from academic level research to running AI at scale in production
- A great team and learning environment
- An attractive salary and bonus scheme
- A company car or public transport subscription
- Team building activities, after work drinks, etc.

Intelligent Automation

Contract.fit helps companies to improve the customer experience and reduce costs by turning documents and emails into actionable data that can be extracted, classified and validated.

The Intelligent Automation Solution

Business Challenges

- Time wasted on manual data entry
- Inefficient processing of documents or emails
- Puzzling customer onboarding processes

Business Benefits

- Time and money saved thanks to automation
- Focus on value adding, important tasks
- Deliver great customer experience

*"We now save 40% of our time processing a single invoice and we handle 3,5 Million per year."
"Our conversion rate for onboarding clients went up with double digits!"*

Complete solution

More than an API connection, covering the entire workflow.

Fast time to set-up

Up and running in a few weeks.

Self-learning

Our product trains itself to become better & faster.
