

Senior Development Engineer / Architect

We are an ambitious scale-up that offers an intelligent automation product. We help our clients provide better customer experiences and reduce workloads by automating everyday cognitive tasks.

We are looking for a senior development engineer with a knack for software architecture to play a leading role in the further development of our Software-as-a-Service product.

What will you do?

- Advance the development of the current and future core modules of our product
- Make architectural choices and advise on which components to use, build or buy
- Advance the various aspects of our self-learning product in line with our roadmap
- Ensure best coding practices are used throughout the company
- Work closely with other engineers (AL/front-end/infra) to align all development efforts
- Solve problems and eliminate bottlenecks
- Above all, ship lots of high-quality code in every sprint!

Who are you?

- Proficient in Python (good coding practices and efficiency)
- Able to build out and maintain high performance API server in Python (UWSGI, Flask)
- Experience in version control (git - branches, pull requests)
- Experience in or willing to work with Agile development methodology
- Experience in or willing to learn Mongo database, AMPQ services (Atlas DB, RabbitMQ)
- Experience with Continuous Development / Continuous Integration (Bitbucket pipelines)
- Scripting in Linux (Ubuntu)

What do we offer you?

- A unique opportunity to work on cutting edge technology in the exciting world of AI
- A great team and learning environment
- An attractive salary and bonus scheme
- A company car or public transport subscription
- Team building activities, after work drinks, etc.

Intelligent Automation

Contract.fit helps companies to improve the customer experience and reduce costs by turning documents and emails into actionable data that can be extracted, classified and validated.
