

## Python Software Engineer

We are an ambitious scale-up that offers an intelligent automation product. We help our clients provide better customer experiences and reduce workloads by automating everyday cognitive tasks.

We are looking for an experienced python software engineer with a proven track record to play a leading role in the deployment of our Software-as-a-Service product.

### What will you do?

- Contribute or lead development on a SaaS product with a modern stack
- Advance the various aspects of our self-learning product in line with our roadmap
- Ensure best coding practices are used throughout the company
- Work closely with other engineers (AL/front-end/infra) to align all development efforts
- Solve problems and eliminate bottlenecks
- Above all, shipping high-quality code in every sprint

### Who are you?

- An expert in Python (you offer inspiration for good coding practices and improve others' code quality)
- Proven track record in software engineering, preferably on a product
- You are familiar with most important parts of a modern SaaS stack:
  - API frameworks in python such as Django or Flask
  - Databases and ORM/ODM
  - Task brokers and message queues (celery, AMQP)
  - General software design pattern knowledge
  - CI/CD and pipelines
  - Cloud infrastructure such as AWS, Azure or GCP
  - Unit and integration testing (Pytest)

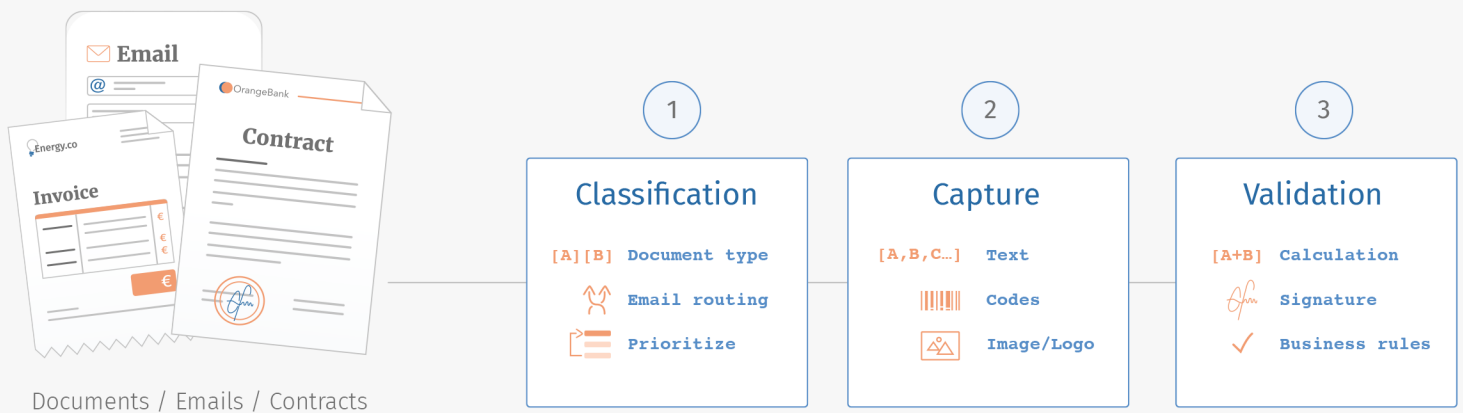

### What do we offer you?

- A unique opportunity to work on cutting edge technology in the exciting world of AI
- A great team and learning environment
- An attractive salary and bonus scheme
- A company car or public transport subscription
- Team building activities, after work drinks, etc.

# Intelligent Automation

Contract.fit helps companies to improve the customer experience and reduce costs by turning documents and emails into actionable data that can be extracted, classified and validated.

## The Intelligent Automation Solution

### Business Challenges

- Time wasted on manual data entry
- Inefficient processing of documents or emails
- Puzzling customer onboarding processes

### Business Benefits

- Time and money saved thanks to automation
- Focus on value adding, important tasks
- Deliver great customer experience

*"We now save 40% of our time processing a single invoice and we handle 3,5 Million per year."  
"Our conversion rate for onboarding clients went up with double digits!"*

### Complete solution

More than an API connection, covering the entire workflow.

### Fast time to set-up

Up and running in a few weeks.

### Self-learning

Our product trains itself to become better & faster.
