

Senior DevOps Engineer

We are an ambitious scale-up that offers an intelligent automation product. We help our clients provide better customer experiences and reduce workloads by automating everyday cognitive tasks.

We are looking for a DevOps engineer with hands-on experience in building a modern SaaS stack to play a leading role in the evolution of our Software-as-a-Service product to serve many concurrent customers worldwide

What will you do?

- Advance the development of the current and future core modules of our product
- Support the expansion of our product to high performance and scale
- Make architectural choices and advice on which components to use, build or buy
- Work closely with other engineers (AL/front-end/infra) to align all development efforts
- Solve problems and eliminate bottlenecks
- Above all, shipping high-quality code in every sprint

Who are you?

- Authorized to work in Belgium
- Proficient in Python (good coding practices and efficiency)
- Linux systems administration expert
- You have experience in setting up a modern SaaS stack:
 - Automation frameworks, such as Ansible, Terraform, or Puppet
 - CI/CD and pipelines on Cloud infrastructure such as AWS, Azure or GCP
 - Containerization technologies such as Docker. More advanced use of docker such as Compose, Swarm or Kubernetes is a plus
 - Unit and integration testing (Pytest) o E2E Test automation (Experience with testing frameworks is a plus)
 - Task brokers and message queues (celery, AMQP)
 - API frameworks in python such as Django or Flask
 - Databases and ORM/ODM

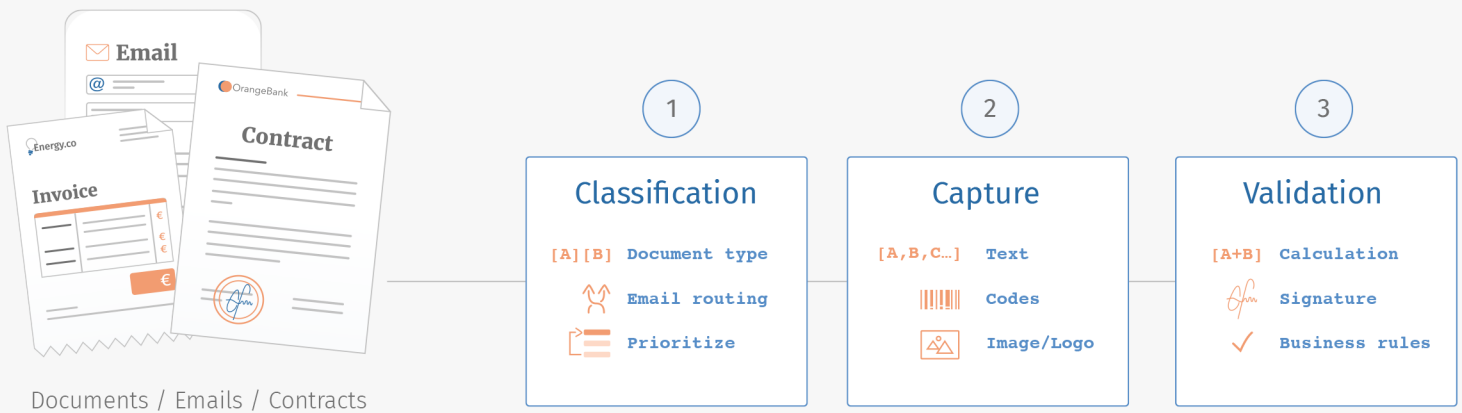

What do we offer you?

- A unique opportunity to work on cutting edge technology in the exciting world of AI
- A great team and learning environment
- An attractive salary and bonus scheme
- A company car or public transport subscription
- Team building activities, after work drinks, etc.

Intelligent Automation

Contract.fit helps companies to improve the customer experience and reduce costs by turning documents and emails into actionable data that can be extracted, classified and validated.

The Intelligent Automation Solution

Business Challenges

- Time wasted on manual data entry
- Inefficient processing of documents or emails
- Puzzling customer onboarding processes

Business Benefits

- Time and money saved thanks to automation
- Focus on value adding, important tasks
- Deliver great customer experience

"We now save 40% of our time processing a single invoice and we handle 3,5 Million per year."
"Our conversion rate for onboarding clients went up with double digits!"

Complete solution

More than an API connection, covering the entire workflow.

Fast time to set-up

Up and running in a few weeks.

Self-learning

Our product trains itself to become better & faster.
